OSSTELL ISQ MODULE

OSSTELL

The Osstell ISQ integrates with the SI-1023 to provide a fast, accurate, non-invasive and simple way of determining implant stability based on quantifiable data, without jeopardising osseointegration or the healing process.

OSSTELL Beacon

The Osstell Beacon helps make dental implant treatment more predictable. Osstell helps you to objectively determine implant stability and assess the progress of osseointegration, based on quantifiable data, without jeopardising the healing process. It allows you to:

- Manage patients with risk factors, making you more effective
- Avoid unnecessarily long treatment time thereby improving efficiency
- Achieve more predictable outcomes giving peace of mind and reliability

The probe magnetically takes a reading from the SmartPeg mounted on the implant without touching it. Using a state of the art user interface and Osstell Connect Data Management data can be recorded using a PC, laptop, tablet or smartphone.

OSSTELL IDx

Launch Price €3,600

The Osstell IDx is a fast, non-invasive and easy to use system which determines implant stability and assesses osseointegration - without jeopardizing the healing process. It provides accurate, consistent and objective information needed to make well founded decisions. It allows you to:

- Assess implant stability and the degree of osseointegration
- Easily interpret results through intuitive ISO scale colour coding
- Effectively communicate with patients and collaborate with colleagues
- Extract data, share files and analyse treatment data through Osstell Connect
- Share patients between multiple IDx's

Surgical Handpiece Range

Whether placing an implant or extracting a wisdom tooth, be sure of optimum cooling and illumination of the treatment site with W&H's top quality, durable straight and contra-angle surgical handpieces, made from high quality stainless steel. Specially designed for oral and maxillofacial surgery and implantology.
